What are monocrystalline solar panels?

Monocrystalline panels are easy to distinguish by the black color of the cells. Their efficiency today varies from 16 to 22%, which means that mono solar cells convert into direct current from 16% to 22% of the sunlight that they receive. That's the most popular type of panels -- in fact, most top manufacturers don't even sell anything else.

Where to buy wholesale solar panels?

If you are looking for a place to buy wholesale solar panels, you've found it. A1 SolarStore offers PV modules from all over the world for competitive prices and with fast delivery. Let us tell you a little about the panels that we offer, how we deliver them and what kind of solar panel you might need.

What is the difference between monocrystalline and polycrystalline panels?

Monocrystalline or mono panels are the most reliable and efficient type, polycrystalline or poly panels are slightly cheaper, but less productive. Thin-film panels or flexible panels are special in a way that they are very light and bend well. Monocrystalline panels are easy to distinguish by the black color of the cells.
