How does Albania currently generate electricity?

Albania currently generates almost 100% of its electricity from hydropower plants. This energy cannot be stored, so it is sold to other countries during the spring and summer when production is higher. But then, come winter, Albania has to purchase electricity from neighboring countries to meet demand.

Why does Albania import electricity in winter?

Albania has to purchase electricity from neighbouring countries to meet demand in winter. This is because Albania generates almost 100% of its electricity from hydropower plants, which cannot be stored. During the spring and summer, Albania sells its excess electricity to other countries.

Does Albania have a power supply security problem?

Albania is a net importer of electricity; power supply security is a challenge. Albania's domestic generation is almost entirely dependent on hydropower since the country's only thermal power plant is currently inoperable.

Will Excelerate Energy Supply a floating power plant to Albania?

U.S. liquefied natural gas company Excelerate Energy Inc. will supply floating power plants to Albania, hoping that the deal will get the company access to Europe's natural gas market. Excelerate will provide power barges that will generate electricity and buoy the grid in the southeastern European nation.

Tirana's story teaches a crucial lesson: Energy storage isn't just about batteries--it's about reimagining urban resilience. Other Balkan cities take note: The future isn't waiting.

Fast forward to today - Tirana's installing energy storage containers that kick in faster than you can say "blackout." The city's solar capacity grew 150% since 2022, but as ...
