In this article I have explained an innovative idea of configuring a few ready made units like a power amplifier, a couple of DC motors and a battery into a sine wave power inverter.

You really want to use something more akin to a class D amplifier, otherwise your efficiency is going to be absolutely horrible, far less than 50%, which would require some very ...

As can be seen the design is not at all complicated. All the involved components are standard, and easily available. The mosfets are IRF540n and IRF9540n which complement each other to produce the requi...See more on homemade-circuits DonRowe Frequently Asked Questions About Power Inverters | DonRowe Short Answer: The size you choose depends on the watts (or amps) of what you want to run (find the power consumption by referring to the specification plate on the appliance or tool).
