Abstract Neutral zinc-iron flow batteries (ZIFBs) remain attractive due to features of low cost, abundant reserves, and mild operating medium. However, the ZIFBs based on Fe ...

Zinc-based flow batteries have attracted tremendous attention owing to their outstanding advantages of high theoretical gravimetric capacity, low electrochemical potential, ...

Zinc-iron flow batteries (ZIFBs) emerge as promising candidates for large-scale energy storage owing to their abundant raw materials, low cost, and environmental benignity.

Abstract Neutral zinc-iron flow batteries (ZIFBs) remain attractive due to features of low cost, abundant reserves, and mild ...

In this perspective, we first review the development of battery components, cell stacks, and demonstration systems for zinc-based flow battery technologies from the ...

Even at 100 mA cm<sup>-2</sup>, the battery showed an energy efficiency of over 80%. This paper provides a possible solution toward a low-cost and sustainable grid energy storage.

Given these challenges, this review reports the optimization of the electrolyte, electrode, membrane/separator, battery structure, and numerical simulations, aiming to ...

This paper explores two chemistries, based on abundant and non-critical materials, namely all-iron and the zinc-iron. Early experimental results on the zinc-iron flow battery indicate a ...
