A report by SolarPower Europe and Fraunhofer ISE finds EU-made solar modules cost EUR0.103 (\$0.12)/W more than Chinese imports, but targeted policies could close the gap ...

Late last year, Estonia's spy chief Kaupo Rosin said that Chinese technology in critical infrastructure, particularly solar farms, could open Europe up to Chinese blackmail.

Today, Chinese companies control more than 220 gigawatts of Europe's installed solar capacity via inverters--the digital brains that ...

But peel back the layers, and a more troubling picture emerges: Europe's solar backbone increasingly runs through China. A ...

In 2024, China again set a record for the launch of new wind and solar power plants. Europe, which is pushing the climate agenda ...

China added almost 374 billion watts of renewable power - three-quarters of it from solar panels - in 2024. That's more than eight times as much as the United States did and five ...
