How much does a 10 kW solar panel cost?

On average, a 10 kW solar panel system costs \$25,400, according to real-world quotes on the EnergySage Marketplace from 2025 data. However, your price may differ--solar costs can vary significantly from state to state. The table below should give you an idea of what you can expect to pay for a 10 kW solar panel system in your state.

Can a 10 kilowatt solar system save you money?

If you've been considering solar, you're probably curious about costs --and maybe a little envious of neighbors who've already made the switch and are enjoying lower electric bills. A 10 kilowatt (kW) solar panel system can help power your home while reducing monthly utility costs.

How much energy does a 10 kW solar system generate?

A 10 kW solar panel system generates approximately 14,517 kWh of electricity each year. That's enough to keep 265 TVs running, power 10 refrigerators, or partially meet the energy needs of an average household (the average U.S. shopper on EnergySage needs about 12 kW of solar). But what else could it do?

How much electricity does a 10 kW system produce?

A 10 kW system produces roughly 14,500 kWh annually on average--enough to cover most American homes' electricity needs. But your home may not be average. If you're consistently running central AC in a hot climate, charging an EV, or heating a pool, you'll probably need more capacity.

Whether you're a solar startup importing your first bulk order from Shenzhen or a do-it-yourselfer outfitting a container home in the ...
