What is solar power & how does it work?

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power. Solar panels use the photovoltaic effect to convert light into an electric current.

What type of electricity does a solar panel use?

AC is the type of electrical current used when you plug appliances into normal wall sockets. What's the difference between solar PV panels and solar thermal panels? Solar PV panels generate electricity, as described above, while solar thermal panels generate heat.

How do solar panels produce electricity?

At the core of solar panels is the photovoltaic (PV) effect. When sunlight strikes the solar cells, it excites the electrons in the semiconductor material, causing them to flow through the material. This flow of electrons is what creates electricity. The more sunlight that hits the solar cells, the more electricity is generated.

How do people use solar energy?

People now use many different technologies for collecting and converting solar radiation into useful heat energy for a variety of purposes. We use solar thermal energy systems to heat: Solar photovoltaic (PV) devices, or solar cells, convert sunlight directly into electricity.

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power.

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. This energy can be used to generate ...

Larger solar cells are grouped in PV panels, and PV panels are connected in arrays that can produce electricity for an entire house. Some PV power plants have large arrays that cover ...

In a nutshell, solar panels generate electricity when photons (those particles of sunlight we discussed before) hit solar cells. The process is called the photovoltaic effect.
