-----

By recognising storage systems under EU funding mechanisms and grid planning processes, the EU can unlock their full potential, not only in stabilising energy supply and maximising...

SolarPower Europe marks its 40th anniversary with a new tagline "SolarPower Europe: Solar, Storage, and Flexibility" and plans to establish a dedicated European battery ...

With the solar, energy storage and e-mobility industry sectors gathering at the Intersolar event in Munich, Germany, this week, European solar PV trade association ...

Researchers in Hungary have developed a model to calculate the optimal PV and battery storage balance to support the European grid in the next few years.

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - ...

With solar energy mainstreaming across the continent, now is the time for European decisionmakers to put batteries at the centre of a flexible, electrified, energy system.

This report analyses the system benefits of coupling renewables with clean flexibility, with a focus on the opportunity for pairing solar electricity generation and battery ...

Energy storage solutions have become an integral part of Europe's renewable energy landscape, enabling greater stability and efficiency in solar power systems.
