Why is energy storage important in the EU?

The European Union has created a comprehensive regulatory framework in recent years to promote the development and use of energy storage technologies. A central element of this framework is the recognition of energy storage as an independent component of the energy system in the EU electricity market directive.

What is the European energy storage inventory?

The European Energy Storage Inventory presents itself as an interactive and user-friendly dashboard, which enables a detailed recording and presentation of energy storage projects across Europe. The platform offers extensive filter functions that allow users to sort and analyze the data according to various criteria.

How many energy storage projects are there in Europe?

The European Energy Storage Inventory provides impressive figures on the current state of energy storage capacities in Europe. According to the platform, 905 projects with a total output of 66 gigawatts are currently in operation.

Are targeted support measures affecting the European home storage market?

In other European countries such as Austria, which takes third place in the European home storage market with a market share of 6%, targeted support measures have also contributed to a positive market development.

According to the European Association for Storage of Energy (EASE), the EU will need 200 GW of energy storage by the end of the decade and 600 GW by 2050. In 2022 ...
