Find the latest statistics and facts on energy storage.

Globally, annual energy storage deployment (excluding pumped hydropower plants) is set to hit another all-time high at 92 gigawatts (247 gigawatt-hours) in 2025 - 23% ...

Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

The global energy storage market almost tripled in 2023, the largest year-on-year gain on record. Growth is set against the backdrop of the lowest-ever prices, especially in China where ...

The total number of microgrid projects such as energy storage in the station area is low but the growth rate is high, and the total proportion of grid-side energy storage is 63.3%.

This chart uses data from the Statistical Review of World Energy to show the top 10 countries with the most battery storage capacity in 2023.

Pumped hydro storage has been the backbone of energy storage for decades, accounting for over 90% of the total installed energy storage capacity globally. This ...

China more than tripled its investments in battery storage in 2023. Lithium-based technologies continued to dominate the battery market. Australia announced plans for the world's largest ...
