How long can a solar pump run?

Practical Performance: Today's solar pumps can run for 16-18 hours from a single sunny day when equipped with battery backup - perfect for gardeners who need reliable operation. Looking for Different Types of Solar Pumps? We're focusing on garden and pond water pumps in this guide, as they're the most common need for home gardeners and pond owners.

How do I choose a solar pump?

Make sure you have a solar panel capable of powering the pump. Larger pumps with higher flow rates and head heights require more power. If you live in an area with frequent cloud cover, consider adding a battery backup or a larger solar panel to ensure consistent operation. Use our handy calculator to find the perfect solar pump for your needs.

How many GPM can a solar pump run?

As a rule of thumb use 1" for up to 8 GPM, 1 1/4" for up to 25 GPM, 1 1/2" for up to 40 GPM and 2" for up to 70 GPM. For optimum pump performance make sure that the wire is sized properly for the length of run between the pump and the solar modules. Wire sized too small will cause a decreased output from the pump.

How much solar power does a water fountain need?

The higher the head, the more power you need. The Recharged Rule of Thumb: For every 100 watts of solar panel, you can typically expect to pump around 1,000 gallons of water per day to a moderate height (e.g., 20-30 feet). Example for a Small 12V Fountain: A small 12V water fountain pump might only need a 20-watt solar panel.

As a rule of thumb, you'll need about 1-2 watts of solar panel capacity for every gallon per day you want to pump from 100 feet. So if you need 1,000 gallons daily from a 100-foot well, plan on ...
