Does Czech Republic have a 5G network?

The public 5G networks in the Czech Republic currently operate on a non-standalone (NSA) 5G architecture, which is built on top of the existing 4G LTE infrastructure. To date, standalone (SA) 5G networks have been deployed primarily as private "campus" solutions.

Will the Czech Republic develop a backbone optical network?

The Czech Republic has already developed a backbone optical infrastructure network to the level of district cities, so further development and potential subsidy support will be directed primarily at the absent backhaul connections and access parts of the networks.

Does the Czech telecommunications market have exclusive rights?

No exclusive rights exist in the area of electronic communications and the level of the competition environment is adequate in European Union terms. The Czech telecommunications market is one of the most highly developed and most liberalized in Central and Eastern Europe.

How does Czechia support the digital transition?

Czechia's recovery and resilience plan supports the digital transition by investing EUR 662 million in the digital transformation of businesses, digital innovation hubs and very high-capacity networks and 5G networks.
