How many Watts should a power station run off?

Watt hours/watts=runtime. If you have a portable power station with a 2,400 Wh capacity, and the device you're planning to run off it totals 400 watts, then ideally you'd get six hours of power before draining the power station.

What size power station do I Need?

The first step to deciding what size power station you need involves taking stock of those electronics and appliances you want to power with it. Start by making a list of devices you plan to use with your portable power station. At the top of your list should be any essential medical devices, such as a CPAP machine.

What is a portable power station capacity?

A portable power station's capacity, which is measured in watt hours (Wh), determines how long a portable power station can provide power for a given total wattage of electronics or appliances before its batteries are depleted.

How do I choose a portable power station?

Determine what requires portable power. The first step to deciding what size power station you need involves taking stock of those electronics and appliances you want to power with it. Start by making a list of devices you plan to use with your portable power station.
