What is EPs cabinet controller (ECC)?

Intelligence is needed for disparate batteries to operate safely and optimally as a single unit. EPS Cabinet Controller (ECC) software connects and disconnects batteries to optimize each string's safely charge and discharge while managing cabinet temperature, voltage balance, and other potential hazards.

What happens if the EPs battery goes down?

The EPS takes power from the battery and is directly connected to it. Therefore, when the battery goes down, it is inevitable for the EPS to stop working. To avoid EPS damage, it is necessary to avoid driving on wet roads. This is due to the fact that the EPS electric engine is linked to the arch and comes into direct contact with the water.

What are EPs cabinets?

Explore the four key technological components driving B2U's innovative solution. EPS cabinets are the building blocks of ESS utilizing EV batteries from different OEMs and varying states-of-health and capacities. Custom-built EPS cabinets integrate used battery packs into a single unit without the need for expensive reconfiguration.

Why should you choose EPs cabinets?

EPS cabinets are easily monitored and controlled, making eventual recycling and repurposing efficient and risk-free. Cabinets are shipped to project sites ready for rapid plug-and-play installation. Intelligence is needed for disparate batteries to operate safely and optimally as a single unit.
