The SEI will lead the development of Space Based Solar Power for the UK, offering large scale, safe, and secure energy day and night, through all seasons and weather.

A quarter of Britain's electricity could be beamed from space with a "Bond-style" floating solar power station, the Energy Secretary has said.

Space-based solar power (SBSP or SSP) is the concept of collecting solar power in outer space with solar power satellites (SPS) and distributing it to Earth.

This new industry builds on historical links between space technology and the development of solar power as a clean energy source.

Three year old Space Solar has completed an 18-month engineering design and development project for key parts of its modular ...

For the first time, researchers from King's College London have assessed the possible impact that generating solar energy in space could have for Europe. They found it ...

Three year old Space Solar has completed an 18-month engineering design and development project for key parts of its modular space-based solar power system.

UK-based start-up Space Solar is hoping to have a pioneering system up and running, with an investment of \$800 million, delivering a set-up capable of beaming back 30 ...
