Will Spain be able to deploy large-scale electricity storage?

The European Commission has approved a new aid scheme that will allow Spain to deploy large-scale electricity storage, both in hybridisation with renewable energy facilities and stand-alone and thermal.

How does Spain regulate electric power storage facilities?

Regulation of Electric Power Storage Facilities: In 2020, Spain introduced a specific regulation (Royal Decree 1183/2020) that defines the administrative procedures for the deployment of storage systems, including BESS. This decree aims to streamline the permitting process, addressing the complexities and delays previously encountered.

Why is the Spanish electricity market adapting?

The Spanish electricity market has been gradually adapting to accommodate BESS. The market rules allow storage systems to participate in energy and ancillary services markets. This inclusion enables BESS to provide services such as frequency regulation, peak shaving, and voltage control, thereby enhancing their economic viability.
