Why did the Airbus A320 move to a solar-powered aircraft?

The move follows an incident involving an A320 family jet in which elevated solar radiation levels were found to interfere with data fundamental to the aircraft's flight-control architecture, prompting an immediate technical response. Intense solar radiation can result from powerful explosions in the solar system.

Does solar radiation affect A320 planes?

In a statement, the European aircraft manufacturer said that "intense solar radiation may corrupt data critical to the functioning of flight controls" on its A320 family of jets, the most popular series of passenger airplanes in the world. The issue will not affect every A320 plane, but about 6,000 are affected globally.

How many A320s are in use?

In the United States, there are at least 1,600 A320 jets in regular use by U.S. airlines, according to Cirium, an aviation data firm. American Airlines is the world's largest operator of the planes, with about 480 in service. Of those, about 340 were first identified as requiring the software update, though the final number may be lower.

Technological advancements are dramatically improving solar storage container performance while reducing costs. Next-generation thermal management systems maintain optimal ...

CVE is an independent French producer, headquartered in Marseille in the south of France. The group is present in countries that encourage the production of distributed generation in short ...

Airbus has urged airlines operating A320 family aircraft to take swift protective measures after engineers uncovered a rare but ...

The A320 solar flare software recall appears largely contained now, so it does not materially change the key short term catalyst of higher deliveries or the main risk around supplier...

In short, you can indeed run power to a container - either by extending a line from the grid or by turning the container itself into a mini ...

Aviation News - Airbus has issued an immediate alert to airlines after an investigation found that intense solar radiation can corrupt ...
