Numerical studies based on the Elia and North China datasets show that the proposed framework significantly outperforms the existing online optimization approaches by ...

Asia is a major economic engine but faces complex development challenges. Blended finance can help the continent build a sustainable and resilient future.

Expert insight on how countries around the world can build secure, equitable and sustainable infrastructure that underpins the global energy transition.

See how edge AI puts intelligence where it's needed most - at the edges of our power networks, working locally on or near the grid's sensors and devices.

Current research focuses on the collaborative optimization of microgrid clusters with shared energy storage, primarily improving system operational efficiency through ...

Local communities generating their own power could become 90% energy self-sufficient, with potential to be fully self-reliant in the future, according to a Dutch study.

Dutch cyclists rode down the world's first bike path made entirely of discarded plastic this week, in a move aimed at reducing the millions of tonnes wasted every year.

Abstract: Microgrids equipped with hybrid energy storage systems (ESSs) are increasingly critical for balancing the intermittency of renewable energy sources and the fluctuations in demand.
