NLR offers a diverse range of data and integrated modeling and analysis tools to accelerate the development of advanced energy storage technologies and integrated systems.

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state ...

The rise of open source platforms for renewable energy data presents a compelling value proposition, bringing numerous benefits while also encountering certain challenges that ...

In this paper, we introduce QuEst-SSIM, an open-source tool that employs discrete event simulation to assess the impact of energy storage on electric grids. QuEst-SSIM integrates ...

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state and federal policies. All data can be ...

These directories compile a variety of battery datasets. They serve as portals to extensive battery research data, facilitating advancements in energy storage technology.

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant ...

ROVI will inform data collection requirements for >\$500 million of DOE-funded demonstration projects. Sandia is leading the development of the data infrastructure (software and reporting ...
