What will NGCP's new substation do?

A formal resolution signed by Chairperson and CEO Monalisa Dimalanta is expected to be issued. The substation is one of six capital projects NGCP has refiled for provisional approval. It will also serve as an alternate power source and a potential connection point for upcoming renewable energy projects in the northern Luzon grid.

What will the Philippines' energy future look like?

Moving forward, the focus will be on the timely execution of these projects, continuous monitoring and ensuring the alignment of regulatory frameworks to foster a stable and efficient energy supply, ultimately leading to a cleaner and more resilient energy future for the Philippines.

How many kV transmission lines are there in the Philippines?

As of 2023, the Philippines' transmission network comprised about 15,316 ckt km of transmission lines at voltage levels of 115-500 kV. Of this, 43 per cent was at the 230 kV level, followed by 38 per cent at the 138 kV level. The transmission network grew at a CAGR of about 2.3 per cent between 2019 and 2023.

What is the future of electricity in the Philippines?

Electricity demand and sales in the Philippines are projected to expand more than four times from 91.3 TWh in 2022 to 408.1 TWh by 2050, growing at a CAGR of 5.5 per cent, with Luzon contributing more than 70 per cent of total electricity sales.

11h?? ? Unscheduled power interruption in Zamboanga City, Zamboanga Sibugay, parts of Zamboanga del Norte, and parts of Zamboanga del Sur, 29 December 2025 ...
