Are new shipping containers more expensive than used?

New containers are typically more expensive as they are in perfect condition and ready for long-term use. Used containers are less costly but have some wear and tear. Shipping container sizes and prices are directly linked to each other. The price also depends on how well the container has been maintained over time.

How much do shipping containers cost?

There are several options available: Cargo-worthy 20ft dry containers. Prices range from \$500 to \$3,000. Cargo-worthy 40ft dry containers. Expect to pay between \$1,000 and \$3,500. 40ft high cube (HC) cargo-worthy containers. Shell out between \$1,500 and \$4,000. The condition of the container greatly influences how much shipping containers cost.

Why are container ships so expensive?

The global container fleet consists of over 30 million TEUs (twenty-foot equivalent units), but availability can fluctuate wildly. Overproduction during boom times often leads to price drops. Both underproduction and hoarding, often seen during crises, can lead to significant price hikes. Seasonality plays a role, too.

Why are container manufacturing costs so high?

Currently container manufacturing costs are up, over 21% higher today than in 2016. Prices in 2016 through 2018 were affected by an industry change from oil (solvent) paints to water based. Retooling and adjusting factory processes is expensive and the prices through late 2018 reflect these challenges.

To help you understand how much a container is based on container size better, we've created a comparison table with common shipping container sizes and prices.
