How can the EU improve the value of solar energy?

Looking ahead, for solar to continue meeting EU targets and providing low-cost energy to European citizens and companies, the EU and its Member States must improve the value of solar electricity within the system. Energy system flexibility and storage are key tools to achieve this.

Does the EU solar sector continue to grow?

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights record installations, policy momentum, and the technology's central role in the continent's clean energy transition. Source: eepowerschool.com

Will EU energy storage rise three-fold in 2022?

The EU estimated that energy storage in the bloc will need to rise more than three-fold from 2022 to 2030, to match projections of a 69% share of renewable energy in its electricity system by then.

Is SolarPower Europe liable?

SolarPower Europe will not be held liable for any direct or indirect damage incurred by the use of the information provided and will not provide any indemnities. In Q2 2025, solar generation hit record highs--45 TWh across the EU, a 22% increase over 2024--driving negative prices in Spain, Germany, and the Netherlands for over ...

Electricity supply is increasingly outpacing demand in Europe as renewable energy capacity grows, making negative prices a more frequent occurrence.

Surging renewable output overwhelmed Europe's power grid in 2025, driving electricity prices below zero more often than ever before.

Eurelectric data shows 2025 was a turning point for Europe's power sector. Record solar growth reduced reliance on fossil fuels and helped contain emissions, but persistent ...

The sharp drop in electricity prices across Europe, including record-breaking negative values in the Iberian Peninsula, highlights the growing mismatch between renewable ...
