Does Iceland have a telecommunications sector?

Iceland has a highly developed telecommunications sector with modern infrastructure. Multiple wholesale and retail providers are operated in a competitive market. As of 2024, Iceland's telecom infrastructure is fully digitised and mostly fibre based, with 93% of households having full-fibre availability. Landlines are based on VoIP technology.

Does Iceland have a mobile phone network?

Mobile telecoms in Iceland adheres to the GSM standard and 2G, 3G, 4G and 5G services are available, as well as a TETRA network for emergency communications. Iceland is connected by four submarine cables to both Europe and North America. Broadcasting is based on DVB-T2 standard for television and FM for radio.

How many telephone circuits are there in Iceland?

They had a capacity of 32 and 24 telephone circuits respectively. In 1980, the first satellite ground station was opened in Iceland, called Skyggvir. Initially connecting to the Intelsat system, most international telephone and telex traffic now used satellite communications.
