---

Japanese optoelectronic and semiconductor manufacturer Kyosemi Corporation has developed a solar cell called the Sphelar that could turn any pane of clear glass into a ...

In late May, Sharp Corp. released a new type of solar panels that can prevent light-related issues by reducing optical reflection. By adopting glass with pebble-grained surfaces, ...

Research and development of next-generation transparent solar panels is advancing. Because they are transparent, these solar cells can absorb heat and generate ...

In late May, Sharp Corp. released a new type of solar panels that can prevent light-related issues by reducing optical reflection. By ...

Covered in over 250 ultrathin perovskite solar panels, the installation reflects Tokyo's push to lead the next phase of solar power innovation, reduce reliance on Chinese ...

Thanks to its high-tech materials-encapsulating two "sheets" of solar panels between panes of conductive glass-this solar glass generates energy at an incredible rate. ...

A research group led by Professor Masanori Sakamoto, who studies photochemistry at the Institute of Scientific and Industrial Research at Osaka University, is ...

This glass, capable of generating electricity by using both exterior and interior light sources, combines aesthetics, thermal insulation and energy efficiency in a single product.
