What is Sofia offshore wind farm & why is it important?

Sofia will play a critical role in contributing to the UK's clean energy transition and reinforcing energy security." The 1.4 gigawatts (GW) Sofia Offshore Wind Farm is located 195 kilometers off the UK east coast in water depths of 20-35 meters and is RWE's largest offshore project currently under construction globally.

Where is the Sofia offshore wind farm located?

Once operational, the Sofia offshore wind farm, located on Dogger Bank, 195 km off the northeast coast of the UK, will transmit low-carbon electricity generated from 100 Siemens Gamesa 14 MW wind turbines. The energy will be carried through subsea export cables to landfall in Redcar, Teesside, 220 km away.

How many homes will be powered by the Sofia Wind Farm?

Today takes us a step closer to achieving our mission for clean power by 2030, with over a million homes expected to be powered by the cutting-edge turbines of Sofia wind farm.

How much electricity does the SOFIA project generate?

All 100 steel monopile foundation structures have now been installed across the Sofia offshore array on Dogger Bank, 195 km off the north-east coast of the UK. Once fully operational, the 1.4 gigawatt project will generate enough electricity to power 1.2 million typical UK homes annually.

It is understood to be the largest offshore wind converter platform of its type in the world, and its installation is a testament to the successful collaboration between RWE and its ...

Van Oord has successfully installed all monopile foundations at the RWE Sofia Offshore Wind Farm, marking a significant milestone in the construction of one of the world's ...

The Sofia offshore wind farm underscores RWE's commitment to advancing renewable energy in the UK. By leveraging innovative technology and sustainable practices, ...

Once operational, Sofia is expected to generate enough electricity to power up to 1.2 million UK homes. The foundations, ...

Once fully operational, the generation output of all 100 of Sofia's turbines will be equivalent to powering up to 1.2 million typical UK ...

# Sofia Photovoltaic Container Wind-Resistant Cooperation

Source: <https://halkidiki-sarti.eu/Mon-15-Sep-2025-34233.html>

Emerging markets in Africa and Latin America are adopting mobile container solutions for rapid electrification, with typical payback periods of 3-5 years. Major projects now deploy clusters of ...

RWE celebrates major progress in the construction of its 1.4 GW Sofia offshore wind farm off the UK coast, including the completion of pioneering recyclable turbine blades, ...

Once fully operational, the generation output of all 100 of Sofia's turbines will be equivalent to powering up to 1.2 million typical UK homes with electricity from wind energy. ...
