LM311 is a dedicatedly designed high speed differential comparator responsible for comparing voltages. The operating supply voltage can range from -15 to +15V for OP-AMPS.

Learn how to use the LM311 with detailed documentation, including pinouts, usage guides, and example projects. Perfect for students, hobbyists, and developers integrating the LM311 into ...

The LM111, LM211, and LM311 devices are single high-speed voltage comparators. These devices are designed to operate from a wide range of power-supply voltages, including ± 15 -V ...

15 V split supplies, as commonly used with operational amplifiers, makes the LM211/LM311 a truly versatile comparator. Moreover, the inputs of the device can be isolated from system ground ...

The ability to operate from a single power supply of 5.0 V to 30 V or ± 15 V split supplies, as commonly used with operational amplifiers, makes the LM211/LM311 a truly versatile comparator.

TI's LM311 is a High Speed, 30V, Differential Comparator With Strobes. Find parameters, ordering and quality information

Learn how to use the LM311 with detailed documentation, including pinouts, usage guides, and example projects. Perfect for students, hobbyists, and ...

Both the inputs and the outputs of the LM111 series can be isolated from system ground, and the output can drive loads referred to ground, the ...
