By mid-2025, Seychelles is poised to take a significant leap in renewable energy with the launch of its first floating solar farm--the largest in Africa.

To date, affordable and effective solar and battery storage systems have opened up new possibilities for the archipelago, particularly ...

In 2023, solar energy emerged as the leading source of electricity production from renewable sources in Seychelles, marking a continued shift towards sustainable energy.

To date, affordable and effective solar and battery storage systems have opened up new possibilities for the archipelago, particularly in its high-end tourism sector.

By deploying floating solar technology, the project makes use of lagoon surface area rather than scarce land, helping to overcome space constraints while unlocking new ...

The Ile de Romainville Solar Park is a 5-megawatt (MW) solar photovoltaic (PV) power plant with battery storage in the Republic of Seychelles. The project includes an energy ...

To this end, the island nation is relying on green energy: a 50,000 square metre solar park with a total output of 6 megawatts was built on &#206;l De Romainville in front of the ...

The Seychelles aim to cover 5% of electricity with renewables by 2020 and 15% by 2030. The local power system operator commissioned a Grid Absorption Study to determine ...
