Current researchers are now reimagining carbon dioxide (CO₂) not simply as a waste to be captured, but as a valuable energy carrier ...

These innovative CO₂ batteries from Energy Dome promise long-duration energy storage for the grid, and reliable 24/7 clean power for data centers.

For an idea of what that might look like in the future, let's check in on a new, long duration energy storage project that can deliver electricity far longer than lithium-ion battery ...

Researchers are developing battery technologies to fight climate change in two ways, by expanding the use of renewable energy and capturing airborne carbon dioxide.

A new technology using liquid carbon dioxide (CO₂) could become a powerful way to store large amounts of clean energy for the electrical grid. This idea is gaining attention ...

Planned capacities for CO₂ transport and storage surged dramatically in the past year, with around 260 Mt CO₂ of new annual storage capacity announced since February 2023, and ...

By utilizing CO₂ as a storage medium, these systems not only provide a reliable and scalable energy storage solution but also contribute to the reduction of greenhouse gas ...

The idea behind the "CO₂ battery" is simple. By compressing the gas using excess green power, it can later be depressurized to spin large turbines. A fully charged facility ...
