The Solar Energy Industries Association (SEIA) has released a whitepaper recommending the US deploy 10 million distributed solar installations and reach 700GWh of ...

To support our vision for a reliable and abundant energy system, the Solar Energy Industries Association (SEIA) is establishing goals for battery storage adoption in the United ...

Energy storage systems, mostly large batteries, are important because they help store solar and wind power for use when the sun isn't shining or the wind isn't blowing. In ...

In its new whitepaper, the U.S. solar trade body has unveiled a vision for 700 GWh of energy storage by 2030, including an ambitious target to deploy 10 million distributed ...

Texas and California continue to lead the market, with 61% of the total installed capacity in Q4, while the remaining 39% was installed across 13 states, expanding storage ...

Energy storage resources have become an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy ...

Solar deployment is accelerating in the second half of 2025, with 21 GW expected to come online compared to 12 GW in the first half. Texas leads this expansion, already ...

SEIA recently announced a major goal: 700 gigawatt-hours (GWh) of energy storage installed across the country by 2030, and the deployment of 10 million distributed ...
