Which Copenhagen railway stations have PV modules?

Sjæloer Railway Station in Valby is the first station in Copenhagen where PV modules supply energy for the platform LED lighting (Picture 4). The total size of PV is 18 kW_{peak}. An on-going process of renovation of all the railway stations will probably repeat this energy optimization of lighting and PV integration on platform roofs.

How a small PV project was sold?

Small PV project was sold by collaboration between the partners Dong Energy (the utility of power) and Green Valby (the local agenda 21 office). Green Valby made the marketing to the citizen of Valby and Dong Energy made the installations and guaranteed the performance. They were able to sell the panels as a good bargain.

Why was the COP 15 meeting in Copenhagen important?

The COP 15 meeting in Copenhagen was of great value for our project due to a change in general mindset. The project supported the creation of a network among citizens of Valby and a Facebook group with focus on low energy measures and renewables.

Danish renewable energy developer Copenhagen Energy has welcomed regional power distributor Thy-Mors Energi as a partner in a 100-MW solar-plus-storage project in the ...
