-----

Let's delve into how wind, solar, and energy storage solutions are poised to become the primary sources of global electricity generation, providing numerous ...

For supporters of the energy transition, 2025 had plenty to complain about: the scrapping of U.S. clean energy policies, wind droughts in Europe, corporate retreats from wind ...

Clean energy momentum builds as solar and wind outpace global electricity demand growth Solar and wind are now expanding fast enough to meet all new electricity ...

The loss of federal tax incentives could increase costs for wind and solar projects, and some state renewable energy mandates have been linked to rising power prices.

The energy capacity of new battery, wind, and solar projects that received approval climbed to 45GW this year, 96% higher than in 2024, according to data from Cornwall Insight.

We must transition to clean energy solutions that drastically cut carbon emissions and provide a sustainable path forward. The synergy between solar PV energy and energy ...

By integrating energy storage technologies, such as batteries and pumped hydro storage, into the grid, we can transform intermittent renewable energy sources like wind and solar into reliable, ...

When the sun doesn't shine and the wind doesn't blow, humanity still needs power. Researchers are designing new technologies, from reinvented batteries to compressed air and ...
